PROJECTS

Cloud Trolley – Buyer–Seller E-Commerce Platform

- Developed a buyer–seller e-commerce platform that enables users to list, browse, and purchase products.
- Integrated MySQL to store and manage product information efficiently.
- Implemented the SMTP protocol in the Contact Us module to send email messages directly to the administrator.
- Used text files for user authentication and binary files to securely store user address information.
- Built core features including user registration, product listing, and order management.

Fake Review Detection System

- Designed a smart review analysis system to detect fake and genuine product reviews.
- Uses machine learning and NLP to classify reviews based on their content.
- Enables users to verify review authenticity through an easy-to-use web application.
- Built with a simple interface for real-time review analysis.

ACCOMPLISHMENTS
